

Team Get Some – Project 3 Milestone

Features Demoed

1. User Login Page
 - a. Email and password login boxes
 - b. Sign in button – will bring users to the home page if information is valid
 - c. Register button – will bring user to account creation/profile set up page
2. User Profile Customization and edit profile page
 - a. Allows the user to enter name and a bio
 - b. The user will set up 5 areas of importance that will be later used to help connect users (skill level, equipment have/want, etc..)
3. Database set up using Postgres
 - a. Storing user information
4. Database initialized on the Heroku Cloud Services

Issues faced

1. Our features worked well as is, however we haven't fully connected our front end to our back end. We need to work on completing the node JS to resolve this.
(Suggestions)
 - a. The TA provided numerous resources such as relevant previous assignments and office hours to discuss how to better our NodeJS phase.
